

Potable Water Treatment

WT 5500 and 6500 Poly-Aluminum Blends

NSF Potable Water Product

WT 5500 and 6500 PAC blends are specially formulated for rapid floc formation, ideally suited to provide excellent clarification performance in direct filtration and conventional treatment systems. Advantages typically include high levels of turbidity, color, and organic matter removal; no treated water pH reduction; and longer filter runs before backwashing.

Product Specifications –

Appearance	Clear to slightly pale liquid
Odor	Odorless to slightly sharp
Specific Gravity	Approx. 1.1 - 1.2
Basicity	Medium to High

Application – WT 5500 and 6500 are supplied as easy to use liquids in 55 gal. plastic drums. WT 5500 and 6500 may be applied directly from the drum without dilution, using a standard chemical metering pump. Plastic fittings are recommended. Your Water Tech Engineer can assist with the proper start-up and application of WT 5500 and 6500 in your treatment system.

Meets AWWA Standards – WT 5500 and 6500 are produced in accordance with **American Water Works Association (AWWA)** and **NSF** Standards for Potable Water Treatment.
